

Website SEO Fixes - Checklist

Website SEO Fixes Checklist

A working checklist of SEO fixes and tasks for a website. Written to be handed to a developer or AI coding assistant to implement directly.

Technical SEO

- ☐ Fix indexing issues
- ☐ Add breadcrumbs
- ☐ Add canonical tags
- ☐ Fix Core Web Vitals
- ☐ Fix orphan pages
- ☐ Add schema markup
- ☐ Validate schema using Google's Rich Results Test
- ☐ Fix heading structure (proper H1-H6 hierarchy)
- ☐ Use clean, descriptive URLs
- ☐ Fix broken links and 404s
- ☐ Check that JS-rendered content is crawlable
- ☐ Make the site mobile friendly
- ☐ Check `robots.txt` and `noindex` tags for accidentally blocked pages
- ☐ Submit sitemap to Bing Webmaster Tools and Google Search Console (GSC)
- ☐ Update `dateModified` in schema whenever content is refreshed

Content SEO

- ☐ Write original content
- ☐ Avoid duplicate content
- ☐ Fix keyword cannibalization
- ☐ Merge thin or overlapping pages
- ☐ Match every page to search intent
- ☐ Add author bio / E-A-T signals
- ☐ Make titles 50-60 characters
- ☐ Write unique meta descriptions
- ☐ Optimize images and add alt text
- ☐ Create dedicated pages for features / use cases
- ☐ Publish comparison / alternatives pages
- ☐ Write the best listicles in your category
- ☐ Create topic clusters around pillar pages

Keyword Research

- ☐ Find high volume, low keyword-difficulty (KD) keywords
- ☐ Google your main keywords, expand "People Also Ask" boxes, and create quick FAQ pages answering those questions

Link Building

- ☐ Get high quality backlinks
- ☐ Add internal links to important pages

Local SEO

- ☐ Add a Google Business Profile for local SEO

Ongoing Monitoring & Optimization

- ☐ Monitor pages losing traffic and rankings
- ☐ Find old pages ranking on page 2 and update them
- ☐ Find pages with high impressions but low CTR, and improve their titles and meta descriptions
- ☐ Search `site:yourdomain.com` on Google - check for titles that are cut off or don't include your target keyword, and rewrite them

Compiled checklist for use by developers or AI coding assistants (e.g. Claude Code, Cursor) when auditing and fixing website SEO.
